1. **Geometric Transformations Playground:** Students build models demonstrating translations, rotations, and reflections. They could create interactive puzzles where visitors have to perform these transformations.
2. **Probability Carnival:** Design simple carnival games (e.g., a spinner game, a dice rolling challenge) where visitors can play and observe probability in action. Students can calculate the theoretical versus experimental probability.
3. **The Golden Ratio Explorer:** Create visual displays showcasing the Golden Ratio in art, nature, and

architecture. Visitors can use rulers and compasses to find instances of the Golden Ratio in provided images or objects.

4. **Tessellation Station:** Students create and demonstrate various tessellations using polygons. They can have a station where visitors can try to create their own tessellations with pre-cut shapes.
5. **Symmetry Scavenger Hunt:** Design an exhibit that highlights different types of symmetry. Visitors can go on a hunt around the fair (or a designated area) to find examples of line symmetry, rotational symmetry, and point symmetry.
6. **Graphing in Motion:** Use graphing concepts to represent movement. For example, students could create a display showing how the path of a thrown ball can be represented by a parabolic graph. Interactive elements could involve adjusting parameters to see how the graph changes.
7. **Fibonacci Funhouse:** Explore the Fibonacci sequence through nature exhibits, art demonstrations, and interactive number-generating tools.

Data Analysis and Statistics Projects: Uncovering Insights

Middle schoolers can grasp fundamental statistical concepts and apply them to real-world data.
